

Radio Alert

Integrating Powerful Video Management Software With Reliable Two-Way Radio Communications

Avigilon Radio Alert takes our easy-to-use video management software — that leverages advanced artificial intelligence and video analytics — and integrates it with two-way radios that offer exceptional voice quality to keep your workforce connected.

This solution enables users to receive and acknowledge Avigilon Control Center (ACC) alarms from their MOTOTRBO radio system. Alerts of activity happening on a site are dispatched directly to their radios via text message and/or text-to-voice alerts. This allows security personnel to be notified through their MOTOTRBO radios so that when analytics or access control events occur, they can quickly investigate without needing to monitor activity on a computer screen.

Features

	<p>PROACTIVE NOTIFICATIONS Dispatch alerts directly to MOTOTRBO radios via text message and/or text-to-voice alerts.</p>
	<p>CONTEXTUAL ALERTS Receive any ACC™ alarm as an alert on the MOTOTRBO radio. This includes alerts related to video analytics, access control, license plate recognition match and external software events.</p>
	<p>TWO-WAY CONFIRMATION Acknowledge an alarm directly from the radio.</p>

Benefits

- Assists with safer and stronger protection of staff, teachers and students with real-time notification of potential security threats.
- Maximize investments with an integrated solution that leverages the strengths of video management software with analytics, access control integration and reliable two-way radio communications.
- Efficient use of resources that allows security personnel to be on active patrol while confidently relying on artificial intelligence to monitor and inform them over radio of security of matters that require further investigation or immediate response.
