SURVEILLANCE REDEFINED

STAY UNDERCOVER AND IN CONTROL WITH THE APX 3000 P25 COVERT RADIO

The APX 3000 P25 covert portable radio lets your officers and agents communicate discreetly without attracting interest or creating a distraction. We have removed the traditional radio elements— keypad, display, speaker and microphone—to create a slim compact radio that operates via accessories. The radio ships with a high-performance IMPRES 3-Wire Surveillance Kit. A wide variety of optional wireless Bluetooth® accessories are also available, allowing your teams to have more flexibility in how they wear or hide the radio. An officer or an agent can place the radio in a purse, backpack or even with another team member up to 30 feet away.

The safety of your teams is your key priority. The APX 3000 radio features GPS tracking to provide real-time location data and a mandown sensor that automatically sends an alert if an agent is in trouble. The integrity of the mission is also protected through the use of multiple types of encryption and Over-the-Air Rekeying, ensuring potential security breaches are avoided.

UNPARALLELED VOICE COMMUNICATIONS

700/800 and UHF Range 1 bands
Full power (3W) 700/800
and (5W) UHF

COORDINATED RESPONSE

P25 FDMA and TDMA capable

PLAINCLOTHES OFFICERS AT A COLLEGE STADIUM

SITUATION:

A major bowl game at a prestigious university. Plainclothes officers are combing through the sold-out stadium, identifying potential threats. They need to communicate without spectators knowing who they are.

SOLUTION:

APX 3000 COVERT RADIO WITH BASIC MISSION CRITICAL WIRELESS COVERT KIT

The APX 3000 Covert Radio provides your plainclothes officers with instant communications and lets them control their radio covertly. Its flexible design lets team members conceal the radio on a belt or in a backpack while GPS location tracks the officers' position throughout the stadium. When combined with the Mission Critical Wireless Covert Kit, the APX 3000 is a game-changer for undercover and surveillance operations. With a variety of covert earbuds that look like commercial accessories, your officers will appear to be talking on a phone or listening to music. A specialized 3.5mm adapter lets you connect any standard off-the-shelf, wired cellular headset to the Mission Critical Wireless push-to-talk (PTT) pod for virtually infinite choices in your appearance. The PTT pod easily fits in a pocket or purse, or can be clipped to your clothing to control the radio conveniently and covertly, wherever it is concealed.

UNDERCOVER TEAM AT A DOWNTOWN RALLY

SITUATION:

A massive protest in a metropolitan center. Undercover officers are dispersed in the crowd, keeping an eye on protesters and able to quickly alert uniformed police if they get out of hand. The officers must conceal their communications, monitor the participants and help keep the peace during the protest.

SOLUTION:

APX 3000 COVERT RADIO WITH MISSION CRITICAL WIRELESS COVERT KIT AND REMOTE CONTROL UNIT

The full-powered APX 3000 allows officers to communicate throughout the city, parking garages and hotels without degradation of communications. Its slim, compact design means it can easily be worn under clothing, in a bag or by another team member up to 30 feet away. To further minimize discovery, we downplayed lights and eliminated the audio output to make sure officers are never compromised. In the event the connection with the accessory is lost, the radio's communications won't jeopardize the mission. To further enhance their undercover operations, the APX Mission Critical Wireless Remote Control Unit mimics a typical car remote while allowing agents to control the radio discreetly. The front side features standard car-key remote buttons that can be configured for push-to-talk (PTT), changing radio channels and adjusting volume. The APX 3000 radio can be also programmed to enable voice announcements confirming channel changes to be heard through your surveillance earpiece or wireless earbud headphones.

Mission Critical Wireless earbuds

PROTECTIVE SERVICES DETAIL AT POLITICAL RALLY

SITUATION:

Political rally at a state university. Protective service federal agents dressed in business attire and plainclothes officers provide security for the officials in attendance. Heightened security issues require that they blend into the audience and communicate as discreetly as possible.

Mission Critical Wireless Completely Discreet Surveillance Kit

SOLUTION:

APX 3000 COVERT RADIO WITH FLEXIBLE ANTENNA AND MISSION CRITICAL WIRELESS DISCREET SURVEILLANCE KIT

Federal and protective service agents need secure encrypted communications between team members so their mission is never compromised. The APX 3000 Covert Radio's discreet design lets them conceal it on a belt or in a backpack, while a flexible antenna option allows placement on the body so all radio components are hidden out of sight. In the event an operative is in trouble, the mandown feature will send an emergency alert and GPS coordinates to surrounding officers in the area, letting them know a fellow agent is in distress.

Worn with the Mission Critical Wireless Completely Discreet Surveillance Kit, the APX 3000 radio delivers secure, uncompromised communications without being spotted. This kit is ideal for the most discreet situations where being able to move freely is a must. With the exceptionally small receiver hidden in your ear, you can listen to your radio in complete privacy through the communications loop worn under a shirt or jacket – there is no visible equipment. Hide the microphone under a suit lapel or in another discreet place and communicate securely without drawing attention to yourself.
