

ENHANCING COMMUNICATIONS DURING SOCIAL DISTANCING

COMMUNICATE SAFELY AND EFFECTIVELY

AS COUNTRIES BEGIN TO RELAX LOCKDOWN RESTRICTIONS PUT IN PLACE TO TACKLE THE COVID-19 PANDEMIC, MANY WORKERS WILL BE RETURNING TO SHOPS, OFFICES, AND FACTORIES AFTER WEEKS AND MONTHS IN ISOLATION

THESE RETURNING WORKERS WILL STILL BE REQUIRED TO MAINTAIN SOCIAL DISTANCING AS THEY TRY TO PERFORM THE TASKS THEIR ROLE REQUIRES, POTENTIALLY CAUSING COMMUNICATION ISSUES AND AFFECTING EFFICIENCY LEVELS.

This “new normal” may continue for many months after the lockdown ends and businesses will need to find ways of maintaining clear communications between colleagues while keeping a safe distance apart.

Whether you work in a small boutique or a large office complex, radios can provide instant communication between individuals and teams across your whole facility. They can also assist in making workers more efficient through automated dispatching via work tickets and location-based tracking systems.

WHAT IS RADIO?

Each user is given a radio handset which sends and receives audio and data sent over these radio waves. A radio system can be as simple as two radios connecting directly to each other, or as complex as an encrypted network that covers an entire country.

LICENCED OR LICENCE-FREE RADIO

YOUR CHOICE OF LICENCE-FREE OR LICENCED RADIOS WILL DEPEND ON THE FUNCTIONALITY YOUR TEAM REQUIRES AND THE AREA OF COVERAGE.

For small shops and offices, you may be able to use licence-free radios. Licence-free radios use between 8-27 frequencies reserved for radio-to-radio communications, but these channels can become congested in busy areas such as town centres and shopping centres where multiple businesses may be trying to use two-way radio as well.

In these circumstances, or for larger facilities or multi-site operations, you will need to upgrade to a licenced system. Licenced systems provide dedicated channels for your operation which can start from one-channel in a small geographical area up to multiple channels spanning an entire country.

Motorola Solutions partner network exists to help you manage the licencing and installation of a larger system. We have partners all over the world who can get your system operational quickly and professionally.

LICENCE-FREE

These radios are designed for smaller facilities where radios can communicate directly to each other and there are free channels in the licence-free range.

LICENCED

These radios offer data services as well as voice communications and can be connected directly to each other or via infrastructure to increase the area the system covers.

FASTER THAN PHONES

BY SETTING UP EACH OF YOUR TEAMS ON A SEPARATE CHANNEL, GROUP CONVERSATIONS CAN HAPPEN INSTANTLY WITH THE PRESS OF A BUTTON.

Any team member on the channel will receive crystal-clear audio thanks to Motorola Solutions' 90 years of design experience. Group conversations are the norm with two-way radios without the struggle of conference calling software and bandwidth issues.

NO DOWNTIME

USERS USING RADIOS CAN COMMUNICATE DIRECTLY WITH EACH OTHER, OR THROUGH REPEATERS INSTALLED AT YOUR FACILITY TO EXTEND THE COVERAGE AREA.

By putting you in control of the system infrastructure, you can reduce your risk of losing communications through telephone networks.

EFFICIENCY FEATURES

MANY MOTOROLA SOLUTIONS RADIOS COME WITH A DISPLAY AND KEYPAD, ALLOWING WORKERS TO COMMUNICATE WITH TEXT.

Programmable buttons can be used to send pre-programmed messages, keypads can be used to craft non-standard messages, and work ticketing systems can be connected to the system to dispatch work orders to your employees.

Models are also available that can be located and tracked inside and outdoors. Being able to visualise where and when groups of employees congregate means you can make changes to ensure social distancing is maintained, while also being able to serve customers better by locating the closest, qualified employee to serve them.

RETAIL SHOP

Team members working at the front-of-store use their unlicensed radios to communicate instantly with members of the team working in the storeroom to request specific stock be brought out. This minimises the amount of contact between employees and reduces the number of employees that a single customer comes in contact with.

CITY CENTRE OFFICE

Employees working across multiple departments and floors in a city centre office need to communicate events such as deliveries, visitors, and enquiries. Small to medium sized teams and facilities can use license-free radios to instantly talk to each other, whilst licensed systems allow workers to communicate over larger areas, or using text to avoid disturbing meetings.

LARGE FACTORY COMPLEX

A manufacturing company with a large campus site can replace its daily in-person briefings for teams and for managers with radios. This ensures that all employees maintain social distancing while remaining informed.

By installing radio infrastructure to provide coverage across the whole site, the company can also implement data services for work ticketing and employee locations, allowing maintenance employees to stay in the field rather than returning to a dispatcher or maintenance office to receive new work orders.

DEPARTMENTAL STORES

A department store with multiple entry and exit points can co-ordinate the number of shoppers in the store by providing staff with two-way radios. The door staff can inform each of their colleagues when a shopper leaves, meaning another shopper can be allowed in.

DRIVE-THROUGH TESTING CENTRES

Workers can communicate information across the whole site instantly such as managing queues and communicating free bays to those controlling access to the centre.

EDUCATIONAL FACILITIES

Staff can monitor the number of students in the cafeteria and ask colleagues to allow another group of students into the area. Teachers can also co-ordinate staggered lesson finishes to ensure that all students aren't travelling around the site at the same time.

RADIO TECHNOLOGY ENABLES YOUR TEAMS TO KEEP COMMUNICATIONS FLOWING ONCE THEY RETURN TO WORK AS LOCKDOWNS ARE LIFTED.

By keeping your employees connected through voice communications and data services such as work ticketing you can maintain and even improve the efficiency of your workforce.

Motorola Solutions experience in developing industry-leading radio solutions coupled with our professional network of partners makes us the perfect solution to your post-lockdown communication needs.
