# Body Cameras: Elevating Security, Empowering Safety

Every day, leaders in healthcare, retail and hospitality encounter a common challenge: ensuring the safety and security of their people, property and locations. In a world marked by uncertainty and evolving risks, these diverse environments require tailored video solutions to address their unique safety needs. Body cameras provide a means of protecting both employees and customers, while also serving as a reliable source of evidence in legal proceedings. Additionally, body camera footage can be utilized for training purposes, enabling organizations to identify areas for improvement and enhance employee skills and response times. With their ability to streamline processes, improve communication and enhance customer service, body cameras are increasingly recognized as essential components of modern enterprise operations, contributing to safer, more secure and more efficient workplaces.

At Motorola Solutions we're dedicated to investing in developing and building new technologies that will provide the most benefit to our customers. By equipping customer-facing employees and security personnel with body cameras, organizations can proactively deter potential threats, document incidents in real-time and promote a culture of accountability and transparency.

Capture critical images, video and audio with a purpose-built body camera that seamlessly connects with your existing business-critical radio and software technologies. Keep your team informed while accessing video evidence every step of the situation from one secure, intelligently organized user interface.

## VB400

### **An independent witness for security guards.**

Capture 1080p high-quality video and audio evidence and experience shift-long battery life with the VB400 body camera. Our proven, trusted and flexible device is relied on by leading security organizations globally.

- Adapt the VB400's behavior to your security teams' responsibilities: enable pre and post-record to capture footage before and after an incident, assign actions to its buttons and remotely share the view of those in the field
- As soon as the VB400 is docked, footage is automatically transferred securely and encrypted to VideoManager EX - without user intervention
- Temperature and weather-resistant, with a battery life of up to 12 hours on a single charge, the VB400 includes dual microphones, a wide-angle lens and Bluetooth and Wi-Fi connectivity

## VT100

### A new perspective for customer-facing employees when it matters most.

Built to create safer working environments, the VT100 is a customizable, easy-to-operate body camera that includes 720p HD video and integrates seamlessly with existing CCTV technology.

- Activate recordings with a single push, instantly capturing footage and saving it to the camera, as well as live-streaming it to a central location
- Share video footage wirelessly to VideoManager EX or transfer it once the camera is docked
- Permission-based access ensures your evidence is managed only by authorized team members, and automated deletion rules reduce administrative burdens
- Configure detailed management reports to deliver relevant information including battery audits, device recording time and incident reports

# Powerful alone. Game changing together.

Body cameras are a critical part of your organization - but they're only the beginning. With multiple ways to connect, Motorola Solutions body cameras enhance the safety of your entire staff by bridging the gap between security professionals and the rest of the team - increasing situational awareness and enabling a coordinated, more informed response.

## Peer-assisted recording

When a situation escalates quickly, a security professional may not have a chance to hit the record button. Peer-Assisted Recording (PAR) immediately activates colleagues' VB400 cameras when they come into range, capturing multiple viewpoints of the same incident.

## Radio connections

Pair with select radios over Bluetooth to immediately record when the user's radio enters an "emergency state" and when the user presses the radio's emergency button or when the radio's Fall Alert sensor detects the user is down.

## Holster activation

The Holster Aware™ Sensor enables security professionals to remain focused, even in the most stressful moments. Attached to holsters, it can detect whether a conducted energy weapon, baton, chemical agent or firearm has been removed from a holster and notify the body camera to activate recording.

## Live streaming

Integrate with Avigilon Unity video and other VMS systems so user-activation of a body camera recording can display the camera's live video feed and send an alarm to the system operator alongside video feeds from fixed cameras. This enables security personnel to gain complete situational awareness and respond accordingly.

# Your body cameras are only as good as the software managing them

Spend less time managing body cameras, and more time focusing on what matters. VideoManager EX software is designed to make body camera management easy — so you can administer your body cameras, and the videos they capture quickly and easily, without extensive training and maintenance. Whether you want to livestream footage or simply store it for later, VideoManager EX minimizes time at the computer and maximizes your hardware investment.

## Easy to deploy, even easier to use

Get up and running quickly with a plug-and-play model; choose an on-premises installation or a cloud deployment managed by Motorola Solutions.

## Personalize the experience

Fit your body cameras' behavior to your workers' needs, and only enable the functionality relevant to your team.

## Make your video work for you

However you want to use your footage, we have all the tools you need to manage it — including redaction and sharing — in one convenient user interface.

# The power of the safety and security ecosystem

Whether it's addressing security concerns, assisting customers or managing everyday operations, a connected portfolio of body cameras and evidence management software keep everyone on the same page, fostering a culture of transparency and ultimately contributing to a more secure and productive environment.

At Motorola Solutions, we build the best possible technologies across every part of the safety and security ecosystem to help protect people, property and places. With our solutions, people can collaborate. Information flows where it's needed. Performance improves. Lives are protected. And safety becomes more than momentary. It becomes the constant that a better world — with safer communities, safer schools, safer hospitals, safer businesses, safer everywhere — is built on.
