VIDEOMANAGER: CONFIGURE DEVICE SETTINGS

PREREQUISITES

This document assumes that:

- You are an administrator who is familiar with the VideoManager system already.
- You have already connected body-worn cameras to VideoManager.
- You have already created users and have given them roles which enable them to operate body-worn cameras.
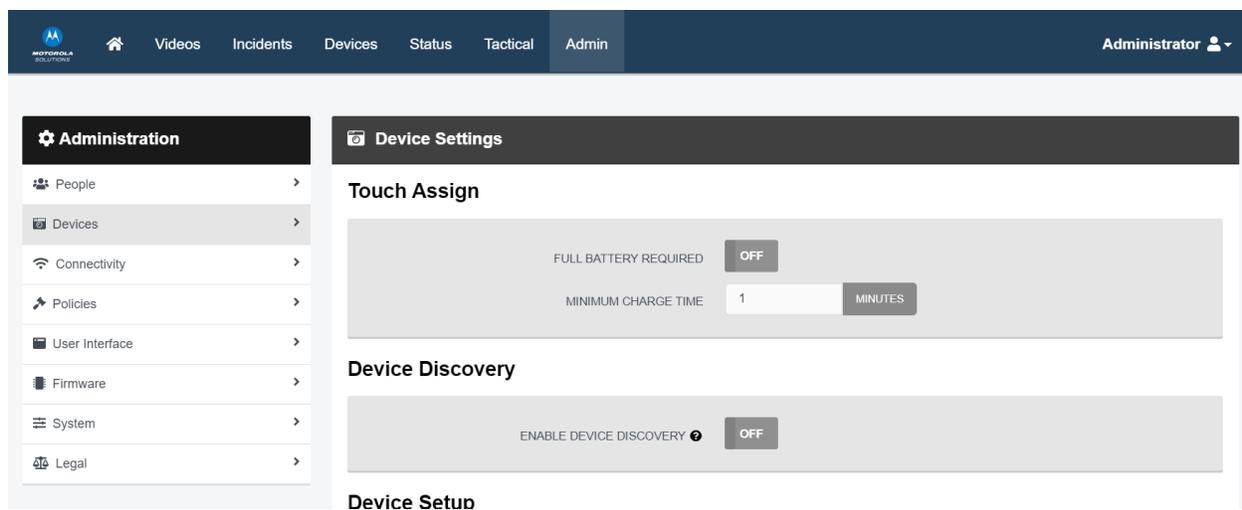

WHAT ARE DEVICE SETTINGS?

Device settings dictate the behavior of all body-worn cameras connected to VideoManager.

HOW DO I CONFIGURE DEVICE SETTINGS?

You can configure device settings as an administrator on VideoManager. To do so:

- Navigate to the **Admin** tab.
- Select the **Devices** pane.
- Click the **Device Settings** section.

You can now configure the following settings:

TOUCH ASSIGN

- **Full battery required** - if set to **On**, operators can only undock their body-worn cameras with their RFID cards if those body-worn cameras have been fully charged. If set to **Off**, you can enter a minimum charge time that must be met before the body-worn cameras can be undocked with RFID.

DEVICE DISCOVERY

- **Enable device discovery** - if set to **On**, VideoManager will detect body-worn cameras which are connected to the machine running VideoManager via USB (e.g. a solo dock). If set to **Off**, VideoManager will only detect body-worn cameras which are connected via configured DockControllers.

DEVICE SETUP

- *Default device assignment mode* - from this dropdown, select the assignment mode which will be presented as default when assigning body-worn cameras from the *Devices* tab. This can still be overridden by administrators on a case-by-case basis.
- *Show public QR code bootstrap screen* - if set to *On*, you can launch a public version of the QR config page when configuring a VT-series body-worn camera. This is useful if remote workers do not have access to VideoManager, but still need to assign their body-worn cameras - an administrator can send them the link to the public page, and the remote worker can use it to assign their body-worn cameras from their own office or home.
- *Configure external application account credentials* - set to *Off*.

DEVICE DOWNLOADS

- *Limit simultaneous downloads to* - determine the number of body-worn cameras which can download footage to VideoManager simultaneously. For example, if set to 10, only 10 body-worn cameras can download footage at once - once one finishes downloading, another one will take its place immediately.
- *Fast download recovery* - if set to *On*, when a footage download is interrupted and then connection is re-established, it will resume downloading from the same point before connection was broken. If set to *Off*, when a footage download is interrupted and connection is then re-established, the download will begin again from the beginning.

DEVICE PROPERTIES

- *Battery life extender* - this should only be set to *On* if you regularly leave your VB400s charging in their docks for 24 hours or longer.
- *Expect connectivity on charger* - if *On*, VB400s will restart periodically if they are charging but not connected to VideoManager. Set to *Off* if you plan to charge VB400s in the field.

Click *Save Settings*.
