

# PSCore for Android Auto and Apple CarPlay

When you're dispatched to extinguish a house fire, treat an unwell patient or handle a violent incident, receiving real-time context about the unfolding situation while en route means that you can arrive informed and ready to help. With PSCore for Android Auto and Apple CarPlay, your team can see and update crucial information about a CAD dispatch job from your vehicle's built-in display - no MDT needed.

## Respond faster and more informed

Officers can easily interact with a list or map view of incidents and other units in the area, see their assignments from dispatch, self-assign themselves to open incidents, complete status updates and launch turn-by-turn navigation to get them on-scene quickly. When an incident's details change, officers can stay informed by on-screen notifications that can also be read aloud.

## Keep your eyes on the road

Safety is our priority. PSCore enables first responders to be situationally aware while also remaining distraction-free: your team can have incident details read aloud, receive updates or change status by using voice commands or built-in steering wheel controls.

## No extra equipment required

PSCore for Apple CarPlay and Android Auto can be used with your vehicle's existing display - meaning you can eliminate costly installation fees and extra bulky equipment.
