

# WORK ORDER TICKETING

HELP MINIMIZE DOWNTIME THROUGHOUT THE PLANT

## IMPROVED EFFICIENCY AND PRODUCTIVITY TO KEEP THE PLANT RUNNING SMOOTHLY

- Work Order Ticketing allows you to coordinate activities and manage issues more efficiently throughout the plant from machine maintenance or issues to facilities upkeep and day-to-day operations.
- MOTOTRBO has been integrated into the world's leading Work Order Ticketing solutions.
- Tickets use pre-configured templates on the radio, simplifying entry and translation. Tickets are allocated to the right users in the right language.
- The work order ticket process can be more effective than conversations in an often loud factory environment, or more discreet in sensitive areas.
- The accountability of a ticket also leads to better employee ownership, and can even be linked to staff performance rewards and compensation - or even identify areas where additional training may be needed.
