USE CASE
ELEVATED TEMPERATURE DETECTION
Safe Hospitals

Operational View

DETECT

ELEVATED TEMPERATURE DETECTED

A thermal camera at a main hospital entrance detects a visitor with an indication of elevated body temperature and alerts the security operations centre.

ANALYZE

TEMPERATURE ALERT VERIFIED

The security operations centre acknowledges the alert and identifies the visitor with an indication of elevated body temperature.

COMMUNICATE

RESOURCES DISPATCHED

Agents at the entrance are notified of the individual and a medical professional is dispatched to the checkpoint.
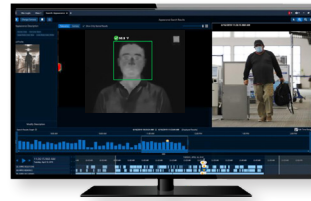

RESPOND

SITUATION RESOLVED

The individual is discreetly isolated, a medical screening is conducted and an incident report is logged.
